

## ABSTRACT OF THE DISCLOSURE

The transfer apparatus includes a light source, a light linearizing device for linearizing light from the light source, a transmission type image display device, and a photosensitive recording medium. The light source, the light linearizing device, the transmission type image display device and the photosensitive recording medium are arranged along a direction in which the light from the light source advances, and a display image transmitted through the image display device is transferred to the photosensitive image recording medium. The light linearizing device converts the light from the light source into linear and substantially parallel rays such that the linear and substantially parallel rays can be incident on a display screen of the image display device and scans relatively the display screen of the image display device with the linear and substantially parallel rays.
